If you require other formats please contact us:

WATER ABSORPTION	< 0,25%
SPECIFIC WEIGHT	2,7 (GR/CM3)
LONGITUDINAL RESISTANCE	> 66 MPA
CARBON CONTENT	<0,5%
THICKNESS	4.5mm – 5.5mm

Grading

All natural slate should be graded into at least 3 thicknesses prior to being loaded on the roof. To minimize the effect of any variation in shade, slate should be selected from at least 2 crates at a time. As with any natural product, slate is subject to variance and any slates that are identified at the time of grading as potentially problematic should be cut and used as either under-eaves or at the ridge.
